Gary, It is fine to use P-102 as a downgradient monitoring point until such time as GMW-2 can be built. If Jim Barber hasn't finalized the wording of the PTO he can include verbage stating that. Ellen

Gary Ahlberg wrote:

Ellen, The proposed wells for the Westside landfill GMW-3, and 4 were staked yesterday for installation beginning Monday 9/13. We were unable to stake GMW-2 due to backwater elevation from the Main Sediment Basin. On Monday, we plan to investigate the riser condition causing the backwater and try to drain the area for installation of GMW-2. As you have noted previously, the existing P-102 could be included in the monitoring system. If we cannot simply dewater and maintain the GMW-2 location, we propose to use P-102 as a downgradient well until construction of PC-3 requires its replacement by GMW-2. The main basin restoration and well replacement would be complete in 2005. Please advise on the acceptability of this implementation plan for the Westside monitoring system. Thanks, Gary Gary W. Ahlberg, P.E.P.O. Box 58Wilmington, NC 28402p 910.232.6696
